### Healthy Eating

**Give reasons to why we need food.**

.....

.....

.....

**Why do we need energy and where do we get energy from?**

.....

.....

.....

Food is made up of different things called nutrients. Nutrients have special jobs to do to keep us healthy. Sometimes several nutrients work together to do a job properly.

There are 5 types of nutrients:

- carbohydrates
- fats
- proteins
- vitamins

- minerals

These nutrients, along with fibre and water are essential to our bodies.

**Design a poster on the computer or a piece of paper. For each key nutrient include foods that are a good source of each type of nutrient. Include pictures and information for each nutrient on your poster.**

### Worksheet

Draw a line to match up each nutrient with the description on the left which best describes its role.

These do most of the repair work to our body cells and they also help us grow. They are found in eggs, milk, meat, poultry, fish and cheese.

**Vitamins and Minerals**

These are found in all sorts of foods. They are only needed in small amounts but they are extremely important. They are found in fruit, vegetables, eggs and milk.

**Carbohydrates**

These give us most of our energy. They are found in bread and potatoes.

**Proteins**

This helps to keep our digestive system healthy and is found in vegetables, cereals, grains and fruits.

**Fats**

These give us energy and help keep us warm. They are found in butter and meat.

**Fibre**
